

# Precision Seaming Chucks for High-Speed Can Manufacturing

At Mason Tool & Engineering, we specialise in the design and manufacture of high-performance seaming chucks tailored for high-speed steel and aluminium can manufacturing and filling lines. Our expertise ensures the durability, accuracy, and consistency required for demanding production environments.

## Our Capabilities Include:

**Precise Digital Profiling:** Advanced digital technologies allow us to achieve exacting specifications and consistent accuracy.

**Precision Turning & Milling:** Our CNC mills and lathes deliver fine tolerances and surface finishes for high-speed operations.

**Heat Treatments for Hardened Surfaces:** Engineered for strength and wear resistance, designed to extend service life and minimise downtime.

## Mason Tool & Engineering!

Proven expertise in tooling and precision engineering  
Specialist knowledge in seaming chuck design and fabrication

Commitment to quality, durability, and performance  
Responsive customer support and tailored solutions

Whether you require new seaming chucks, refurbishments, or tailored engineering solutions, Mason Tool & Engineering has the experience and capability to deliver.
